

Loop.Ik

Brand & UI Foundation v1

Calm. Human. Fast. Trustworthy.

Teacher first

Common actions should take very few taps, with bulk actions and exception editing.

Parent clarity

Open Loop and understand the child's day immediately.

Child privacy

Visual design must never weaken tenant isolation, permissions or media privacy.

Reference for prototype, MVP and future native app work. Logo/icon artwork is intentionally not finalized here.

Color system

Warm neutrals + restrained evergreen; no rainbow nursery palette.

Loop Evergreen 700

#2F6F68

Primary actions

Evergreen 800

#255C57

Pressed / high contrast

Evergreen 100

#E7F1EE

Selected / soft highlight

App background

Warning

Error

Info

Use color to communicate hierarchy or state, not to decorate every container. Aim for 80-85% neutral surfaces, 10-15% evergreen and no more than about 5% accent/semantic color.

Typography

One clean sans-serif system; readable before decorative.

Screen title

28 / 34 • 700

Page title

24 / 30 • 700

Section heading

20 / 26 • 600

Body

16 / 24 • 400

Label / button

14 / 20 • 600

Metadata

13 / 18 • 500

Font decision

Latin UI: Manrope 400/500/600/700. Sinhala: Noto Sans Sinhala UI. Tamil: Noto Sans Tamil UI. Self-host font assets for privacy, reliability and caching. Native versions must preserve platform text scaling / Dynamic Type behavior.

Component language

Familiar, touch-friendly and restrained.

Buttons

Layout rules

48px minimum

Default touch target across the PWA.

4px spacing grid

Use 4, 8, 12, 16, 20, 24, 32, 40, 48.

12-14px radii

Controls 12px; cards/sheets 14px. Pills only when semantically pills.

Flat before floating

Prefer spacing/dividers to heavy shadows and card stacks.

One primary action

Do not place several equally loud buttons in one area.

Visual voice

No default emoji. No generic AI-SaaS styling.

Use

- Custom 24px SVG icon set
- 1.75-2px rounded strokes
- Real task language
- Flat lists where possible
- Warm ivory + white surfaces
- Real nursery media as content
- Quiet transitions
- Purposeful empty/error states

Avoid

- Default/system emojis
- Purple-blue gradients
- Glassmorphism
- Card around everything
- Excessive pill badges
- Giant 24px+ radii
- Random colored icon tiles
- Generic AI/3D children art
- Copy like “unlock” or “supercharge”
- Decorative dashboard clutter

The app should look designed because decisions are consistent and specific, not because it contains more decoration. Codex must consume shared design tokens rather than inventing styles screen by screen.

Two experiences, one brand

Parent = calm timeline. Teacher = fast operational workspace.

Build rules

Accessibility, privacy and native-app readiness are part of the brand.

Accessibility

WCAG 2.2 AA baseline. 4.5:1 normal text, 3:1 large text. Support 200% text resize. Use visible focus states and never rely on color alone.

Privacy by design

No sensitive child details in lock-screen copy by default. No public child-media URLs. Avoid unnecessary third-party assets/trackers in authenticated child views.

PWA identity

One global Loop Home Screen icon initially. Standalone display mode. Provide maskable icons. School branding lives inside the app.

Future native app

Use a monorepo with apps/web now and reserve apps/mobile for a future Expo app. Share design tokens, types, validation, domain logic and API contracts - not forced cross-platform DOM components.

Codex rule

Before generating a screen, read the brand guide and tokens. No new color, radius, font size or shadow should be invented locally without deliberately updating the design system.

Research basis

Current official guidance + competitor and community pattern review.

Apple Human Interface Guidelines

Accessibility, Buttons, Branding; current WWDC design guidance on restraint, typography and Dynamic Type.

W3C WCAG 2.2

Contrast minimums and 200% text-resize requirements.

Android Developers

48dp touch-target recommendation.

MDN PWA docs

Manifest, standalone experience and maskable app-icon guidance.

Expo documentation - Sep 2026

First-class monorepo support for future React Native / Expo expansion.

Brightwheel, Famly, Lillio, Illumine

Current public childcare product interfaces and positioning were reviewed for category patterns and differentiation.

2026 design/developer community discussions

Recurring criticism of AI-generated UI: purple gradients, excessive rounded cards/pills, default component-library styling, clutter and generic copy.

Important

The palette is a design recommendation based on legibility, restraint, product context and differentiation. This document does not claim that a specific hue has a scientifically guaranteed emotional effect.
